# CONCEPT

Hertzy is an implementation of mediator pattern and promotes loose coupling between components (modules). The largest benefit provided by Hertzy consists of reducing the communication channels needed between objects or components in a system from many to many to many to one. In the specific Hertzy allows to create multiple event bus represented by object called frequency and every module can listen or emit an event over selected bus.

## Note:

 This color represents the necessary empty space between the mark and other surrounding elements, this space must be equal to at least 20% of the height of the logo.

 This color represents the empty space between the logo and the mark and it is equal to 15% of the height of the mark

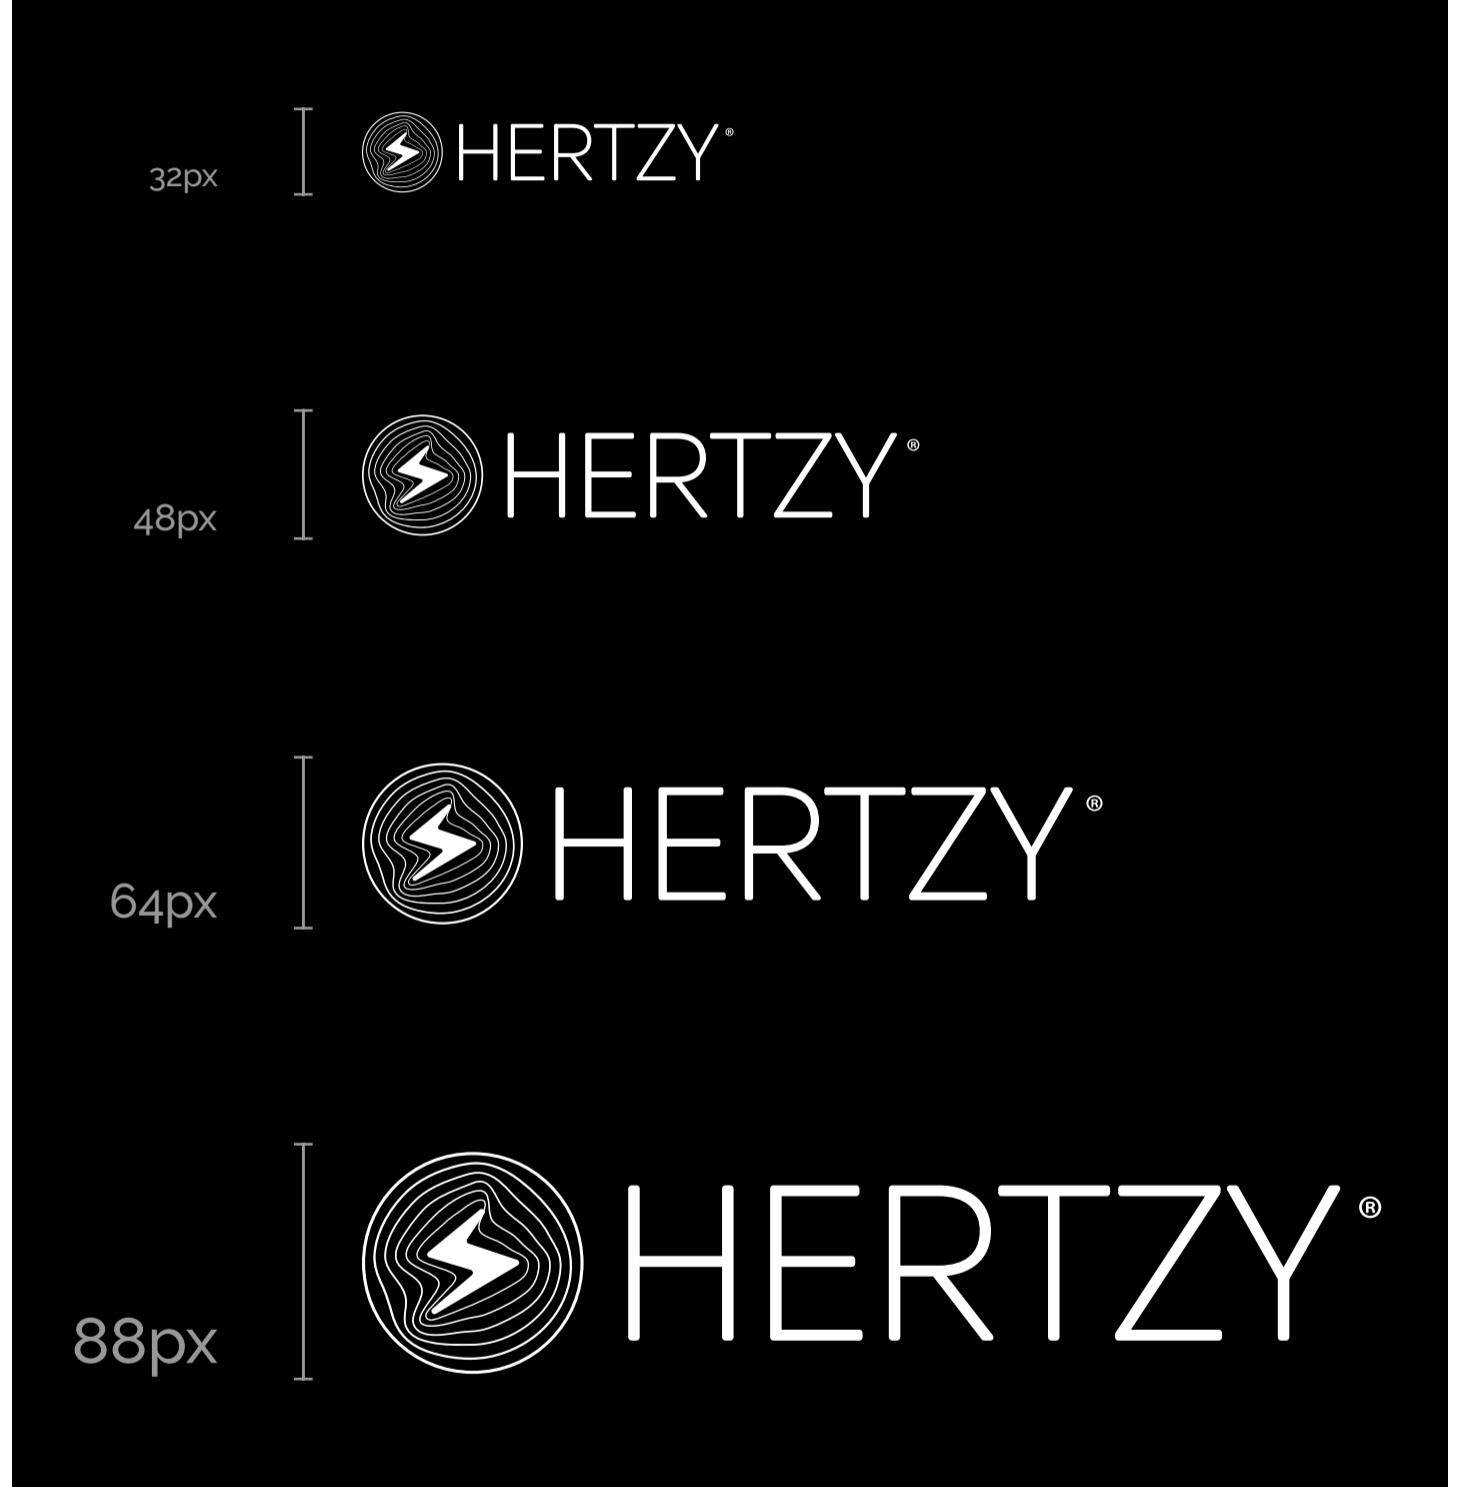

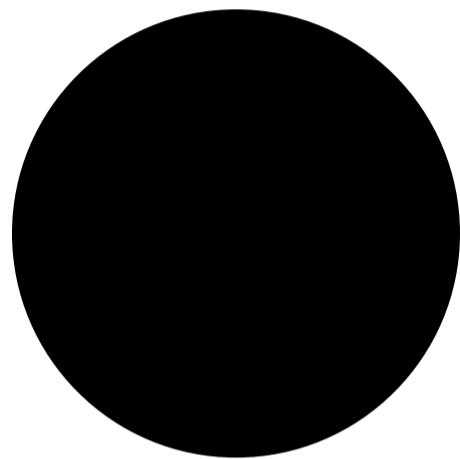

32px  HERTZY®

48px  HERTZY®

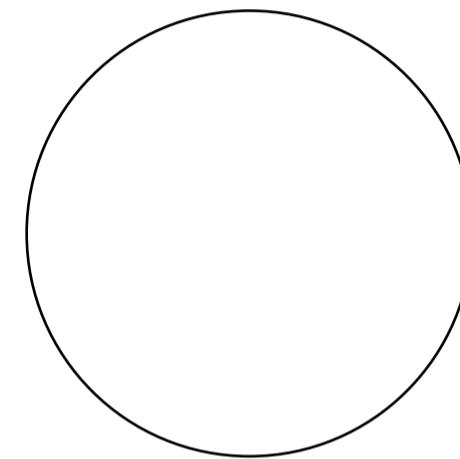

64px  HERTZY®
